Trimble AX940

GNSS TRIPLE-FREQUENCY SMART ANTENNA WITH MSS BAND DEMODULATOR FOR PRECISE POSITIONING APPLICATIONS

MULTI CONSTELLATION GNSS

The Trimble AX940 supports both triple-frequency for the GPS and GLONASS constellations plus dual-frequency from BeiDou and Galileo. As the number of satellites in the constellations grows the AX940 is ready to take advantage of the additional signals. The Trimble ProPoint™ positioning engine delivers the quickest and most reliable RTK initializations for 1–2 centimeter positioning. For applications that do not require centimeter accuracy, the AX940 delivers high accuracy GNSS, DGNSS positions in the most challenging environments such as urban canyons. Different configurations of the module are available. These include everything from a DGPS L1 unit all the way to a four constellation, triple-frequency RTK unit. Choose the receiver that suits your application and price point. All features are password-upgradeable, allowing functionality to be upgraded as your requirements change.

With the option of utilizing OmniSTAR or RTX services with Integrity Monitoring, the AX940 delivers varying levels of performance down to centimeter-level without the use of a base station or cell modem.
